

emana

Technology and innovation taking care of your body with confort

It's all about FIR

• Far Infrared are electromagnetic waves:

- Invisible to naked eye.
- Characterized by low energy and low penetration, without any collateral damage to biological tissues.
- Which interacts with human body by the strong interaction with water molecules which represent 70% of human body mass.

The benefits of FIR have been studied for years, in several fields:

- Sportive
- Cosmetics
- Therapeutic
- Medical, in several segments (Oncology, Physiotherapy, Cardiology, etc.)

emana
